IMP Formal Semantics

May 20, 2024

Syntax

```
boolean ::= true \mid false
b ::= boolean
i ::= int int
skip ::= skip
vals ::= b \mid i
x ::= var x
aexp ::= x \mid i \mid plus aexp aexp \mid times aexp aexp
bexp ::= b \mid le aexp aexp
```

 $bexp ::= b \mid \text{le } aexp \ aexp$ $com ::= skip \mid \text{assn } x \ aexp \mid \text{seq } com \ com \mid \text{if } bexp \ \text{then } com \ \text{else } com \mid \text{while } bexp \ \text{do } com$ $expr ::= aexp \mid bexp \mid com$

Configurations

Arithmetic Expressions Big Step

```
\mathit{aconfig} \hookrightarrow i
```

Boolean Expressions Big Step

```
\mathit{bconfig} \hookrightarrow \mathit{b}
```

Commands Big Step

$\mathit{cconfig} \hookrightarrow \mathit{store}$

```
{store st, com skip}
[CEVAL-SKIP]
                                                                                                       \hookrightarrow st
[CEVAL-ASSGN]
                                {store st, com assn x a}
                                                                                                       \hookrightarrow st_0 if {store st, aexp a} \hookrightarrow n
                                                                                                                          \wedge st_0 = \operatorname{append}(st, x, n)
